

ENERGY POLICY

ISO 50001 ENERGY MANAGEMENT SYSTEM POLICY

Mall of Istanbul Shopping Mall, through the implementation of the ISO 50001 Energy Management System, is committed to the continuous improvement of its Energy Performance, aiming to protect natural resources, reduce greenhouse gas emissions, and pursue a sustainable process. Within this scope, the following commitments have been adopted.

- Top Management undertakes to provide all necessary information and resources to ensure the sustainability of the Energy Management System and to continuously improve it under the following principles:
- Establishing targets in line with the Energy Policy with the participation of all employees, creating actions to achieve these targets, reviewing them regularly, and providing the necessary investment,
- Evaluating the design, modification, and improvement of the facility, equipment, and systems in line with objectives to improve energy efficiency and reduce energy consumption,
- Ensuring the effective procurement and use of energy-efficient equipment and services,
- Complying with legal regulations regarding energy efficiency, energy use, and energy consumption, as well as meeting the requirements of international standards adopted by our company,
- Establishing effective communication with all stakeholders to create shared values and beneficial outcomes regarding Energy Management,
- Using appropriate resources and technologies in new operations under energy control,
- Improving energy performance indicators across all processes, including energy efficiency and intensity,
- Continuously enhancing energy efficiency and implementing improvements aimed at reducing energy consumption, monitoring their implementation, and following up on the results.
